made tangible

Learn about the drivers that create our cities

Register for How Cities Are Built: Fundamentals of Urbanism and Environmental Design (LAR 582.022)

This course will give students an overview and understanding of how cities, primarily American ones, are built through the work of professionals in the design industry. Blending an overview of history, theory, building construction + technology, planning policies, and city systems. Students will receive a "crash course" in the fundamental components that impact the design of cities.
